

Aprende a interpretar el relieve y las curvas de niveles:

La teoría

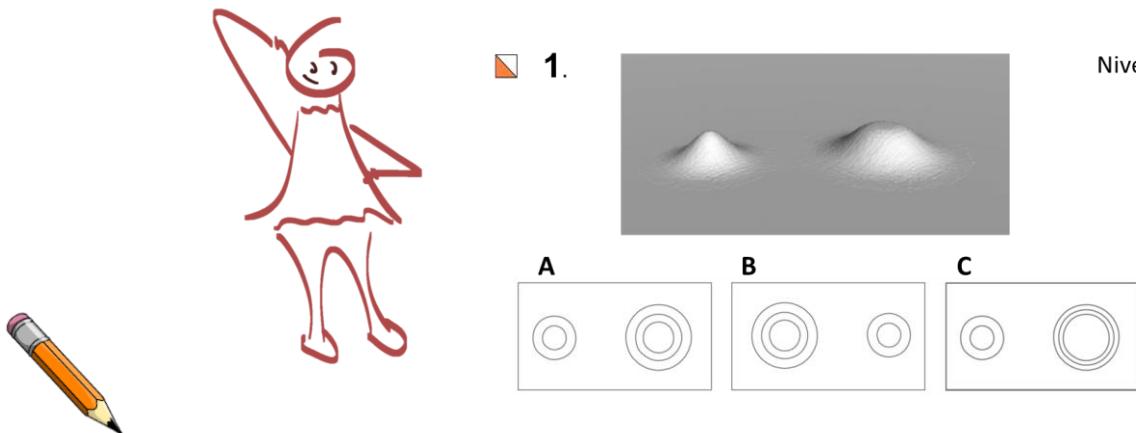

- **Objetivo :** Aprender a interpretar las curvas de nivel y asociarlas a un relieve.

■ Situación :

- Se puede hacer en sala solo o en grupo con un proyector.
- Se puede combinar con unas series de correr entre cada ficha y cronometrar la toma de decisión para las y los alumnos mas avanzados. (tipo recorrido en pista, patio, o bosque abierto donde se vea las balizas).

■ Como hacer el ejercicio:

- En el terreno existe cuestas y bajadas que representamos con las curvas de nivel (visto anteriormente). A “Ori” le gusta mas bien poco subir de mas para ir a una baliza. Tendrás que ayudarla a relacionar la forma del terreno representada en 3D al dibujo del mapa correcto que le corresponde.
- Ojo: Fija te en las formas pero también si la pendiente esta fuerte o suave.
- Como Ori bien sabe, el mapa SIEMPRE orientado.

- **Material:** Imprimir y plastificar las 8 fichas para colocar en lugares o mesas diferentes para realizar un recorrido. + para cada alumno una tarjeta de control para apuntar los resultados con un lapiz o boli.
- **Soluciones :** ver ficha de soluciones

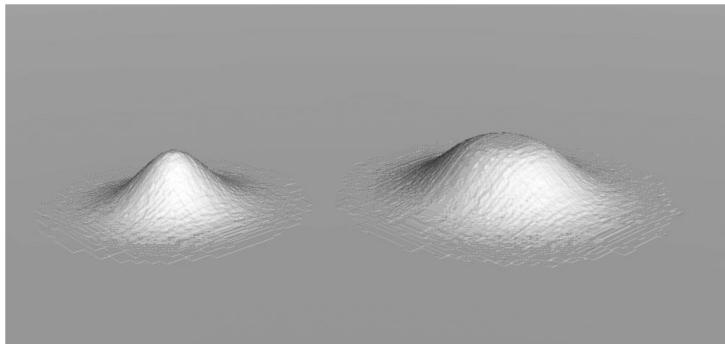

Aprende a interpretar el relieve y las curvas de niveles:

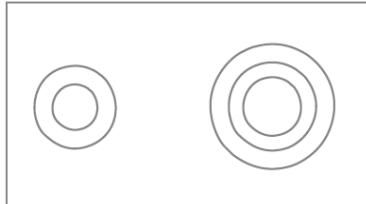

Indica a que mapa de curvas de nivel corresponde el relieve de la figura.
